

## WATER TANK INSTALLATION INSTRUCTIONS

### IMPORTANT:

- Before installing you must read instructions below.
- EGR recommend that you use a qualified tradesman to install your tank.

#### SITE PREPARATION

#### TANK INSTALLATION

1. Tank site must be level and free of any rocks/stones or foreign objects that may damage base of the tank.
  - Site must be solid. If fill is to be used, ensure tank site is well compacted.
  - Tanks can be positioned on 75-100mm of level packing sand, a level concrete slab or a tank stand.
  - Sand Sites should be at least 300mm greater in diameter than the tank.
  - Sand must be contained to avoid any under tank erosion from wind, water or vermin such as rabbits
  - Concrete slabs must be smooth finished to avoid rough screemings on surface
  - Concrete slabs must be of sufficient thickness and suitably reinforced to support the tanks weight when full.
  - Tank stands should have hardwood decking spaced no more than 50mm apart.
  - Bearers must have sufficient strength to prevent deflection when tank is full.
2. A flexible section of pipe should be installed after the tank outlet fitting and gate valve to absorb shock and protect the tank fittings.
  - Tank overflow should be run well away from the tank to avoid undermining the base.
  - With tanks on stands, pipes should be supported by the stand, not the tank.
  - In all installations make sure outlet pipes are well supported and not depending on the tank walls for stability.
3. Outlet fitting must be installed at marked locations 130mm up from base of tank.

#### TANK INSTALLATION

### DISCLAIMER:

EGR recommends that each tank is installed by a qualified tradesperson. Each tank must be installed in accordance with product specification guidelines and in accordance with local, state and federal regulations. EGR accepts no liability in the case of faulty or incorrect installation, or installation which would be considered hazardous or dangerous. EGR accepts no liability concerning incorrect use of this water tank or use outside of normal household use.
